Frontend Developer

100% Remote Worldwide
Full-time

To apply for this position please send your CV to recruitment@nunet.io with the job title as the subject line.

The Company

NuNet, a spinoff of SingularityNet is a framework for shared and globally distributed computing. NuNet platform is designed to be an extremely flexible network, encompassing mobile consumer devices, edge computing and IoT devices alongside PCs, servers and data centers, allowing seamless interoperability among its components and intelligent automation of workflow design. NuNet leverages Web3 technologies, serverless container execution, service mesh orchestration, crypto-economy and more, toward creation of the decentralized "world computer"

Job Description

NuNet is looking to hire a Frontend Developer with a good eye for aesthetics and tranquillity to join its development team. As a member of the team, you will be working closely with the developers, focusing on the frontend aspect of the NuNet platform development and testing. You will be implementing new features, fixing bugs and writing tests related to frontend systems.

As NuNet is a startup with an exciting journey ahead, your contributions will have a great impact on the future of the company and you would be able to grow alongside it.

Responsibilities

As a Frontend developer, you will be responsible for the frontend of the NuNet platform. Tasks involve, implementation of a website dashboard, a desktop application and many more applications. You will be responsible for contributing to UI/UX designs and implementation with an elegant and quality code for performance, maintainability and reusability.

Your duties will include:
- Fully understanding the goal of NuNet and contributing to the design of frontend systems and applications
- Implementing new features
- Fixing bugs as they are discovered and reported by users, team members or yourself
- Writing test scripts to ensure required functionality is correctly implemented
- Collaborating with other team members for shared goals
- Engaging with community developers

Requirements

- At least 4 years of experience working on website and desktop application design and implementation
- Expert knowledge of design principles
- Proficiency in HTML, CSS, JavaScript and jQuery

- Proficiency in at least one of most popular frontend frameworks such as ReactJS and VueJS
- Experience with mockup design applications such as Invision
- Experience with CI/CD tools and practices
- Deep knowledge of design and architectural patterns
- Solution Focused
- Excellent communication skills and ability to work as part of a team or independently as required
- Fluent English
- Data driven decision making

Benefits

- Flexible schedule
- Remote work – ability to work from anywhere (since you have a visa to work form that country/place).
- Work with a multicultural team
